

pbxnsip - Interoperability Partners

pbxnsip IP PBX is designed and built to use Open Standards.

Open Standard and not Open Source

Open Standard means using a protocol which is defined by a group or member structure. A common Open Standard protocol is HTTP, it is designed by a group and everyone maintains the standards.

Session Initial Protocol (SIP)

pbxnsip, as the name suggests, uses the Session Initiation Protocol (SIP). pbxnsip IP PBX software acts as the core to a PBX solution. To enable a full deployment of your IP PBX, other components are required...

- IP Phones
- Softphones
- Adapters
- PSTN Gateways
- PSTN Cards
- ITSPs
- Microsoft Exchange
- Microsoft OCS
