

pbxnsip for ISP & ITSP

Internet Service Providers with the needs of deploying hosted IP PBX services to a wide range of customers

We understand the ISP market very well with our ITSP IP PBX. Our solution fits into existing and new ISP deployments with no need for specialist changes. ISPs around the world are using pbxnsip Hosted IP PBX as the base to their business and success.

The ISP/ITSP market is aggressive and only the people with the best features will win. Our Hosted IP PBX product OR third party ITSP solution with Solutions11, makes pbxnsip a perfect choice for ITSPs or potential ITSPs in the market place today.

Benefits

- *Concurrent call license*
- *Rented model available*
- *Unlimited Domains for domain partitioning customers*
- *Full PBX functionality in a hosted environment*
- *Offer Secure SIP connections*

ITP continuity is vital to any business so we appreciate that you need your hosted PBX to be up and running with minimal fuss and no complications.

pbxnsip software can be deployed on Windows Linux or MAC and is activated by a simple license key which determines how many extensions you can create on the pbx. No need to wait for complicated programming and cabling, an out of the box solution can be configured and in use within minimal time leaving you business to run smoothly.
