

## pbxnsip for SMB

Small Offices with the need to benefit from an IP PBX and its features, for a fraction of the price of a normal tradition PBX/PABX

We understand that as a small business, detailed consideration needs to be made when researching and implementing an investment as business critical as telephony.

### **Benefits of pbxnsip SMB Solution**

- *Business critical*
- *Minimal Cost of Ownership*
- *Stable platform*
- *Flexible solution for reducing costs*
- *Mobility features so never miss a call*
- *Unified Communications*

You can rest assured that pbxnsip IP PBX software has powerful business applications already built in on every level and will serve your communication needs in all instances.

Business continuity is vital to any business so we appreciate that you need your pbx to be up and running with minimal fuss and no complications.

pbxnsip software can be deployed on Windows, Linux or MAC and is activated by a simple license key which determines how many extensions you can create on the pbx. No need to wait for complicated programming and cabling, an out of the box solution can be configured and in use within minimal time leaving your business to run smoothly.

## **Considerations:**

It goes without saying that there will always be a initial investment involved in purchasing a new telephone system, however this does not need to be a costly affair. Cost of ownership needs to be considered on an on-going basis not just the initial outlay. pbxnsip being compatible with other 3rd party applications and open standard means that you can shop around for suitable hardware that fits your budget and not be dictated to by proprietary systems with a fixed higher price.

Choosing a suitable IP PBX can be a daunting task, VoIP and SIP technology being relatively new in the market place you need to be sure that you are comfortable with the system that you are investing in. pbxnsip have actually been in the IP Telephony market for several years and have 10+ years SIP development behind us. The pbxnsip IP PBX has been tried and tested for many years and has built the brand on stability and security.

VoIP is obviously seen as a alternative cost saving solution to the legacy PSTN systems, allowing you to terminate IP minutes at a fraction of the cost or traditional ISDN or Analogue lines. pbxnsip IP PBX can actually allow for SIP traffic and PSTN termination through a media gateway, this is attractive to the SMB market with SIP trunks allowing for low cost line rental and calls plus the added benefit of functionality such as home workers and Call Back on the pbx not forgetting that you can have failover to PSTN in case of connectivity failure.
